

Exporting Citations from Databases into EndNote

EndNote is software that can organize, store, and input citations into Word documents to help you with your research. The College of St. Scholastica has a site license which offers two options for you to access EndNote, and you can either pick one or use both as the situation warrants.

Please see the tutorials for how to use [EndNote Download](#) or [EndNote Web](#) as well as the appropriate database tutorials for more information on how to use those programs.

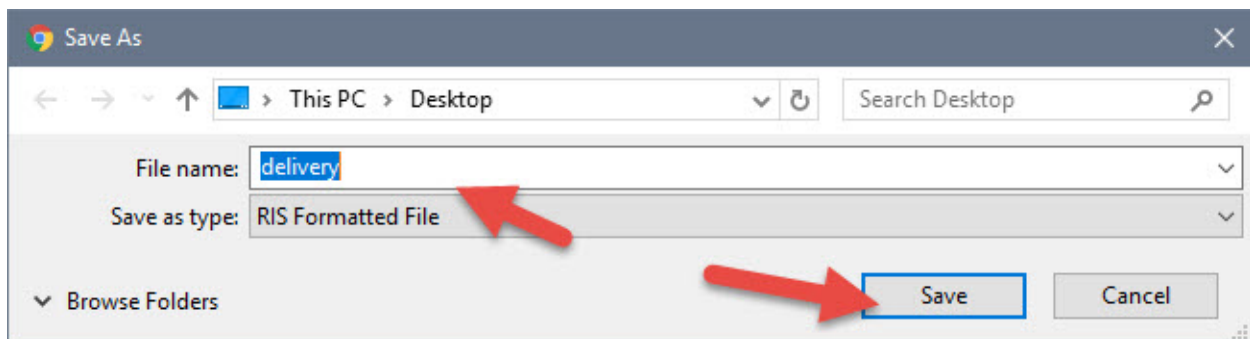

Citations can be added to your EndNote library in two ways. The first is by you entering the source's information such as the author, title, publication date, etc. into the various fields. The second way is by exporting the citations from the database you are using to search for articles directly into EndNote.

This eliminates you having to type in the information, but you will still need to verify to make sure the citation is correct. Each database interacts with EndNote differently to export and import the citations, so see the instructions for these various databases to find out how to do it. This list is not inclusive, and some databases do not have this capability, so please ask a librarian for more help if you have any questions.

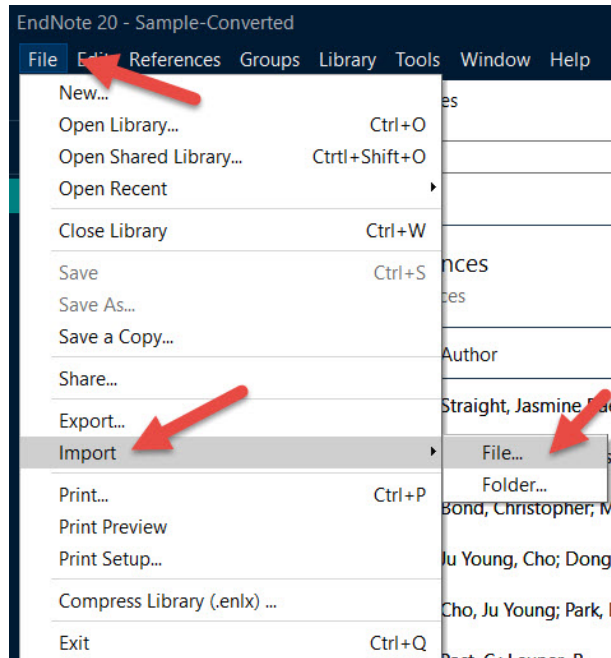

For all databases that use RIS Files to export citations, which is all of them in this tutorial except for PubMed:

Once you have selected which articles you wish to add to your EndNote library, which does vary from database to database, these instructions are the same. See the instructions below for how to select articles for various databases.

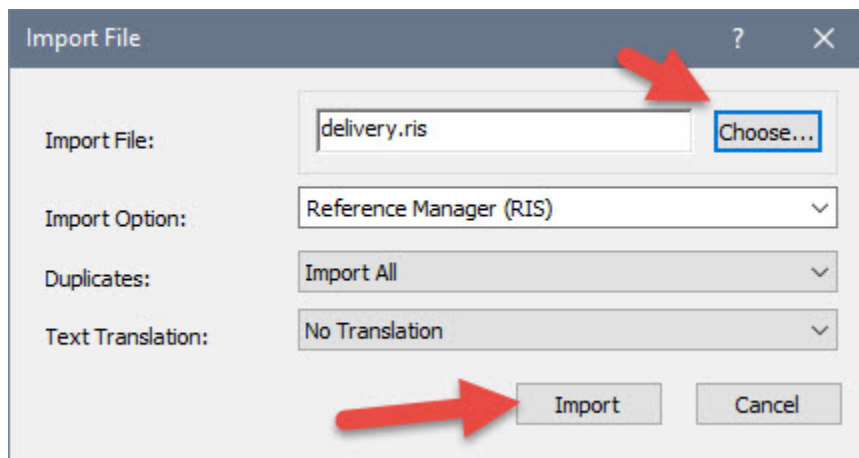

Click on the *Save* button when you have selected where you wish the file to be saved.

Open the EndNote library you wish to add the citation to and in the *File* tool bar option, select *Import* and *File...*

Click on *Choose...* to select the file you just saved and click on *Import* once you have selected it.

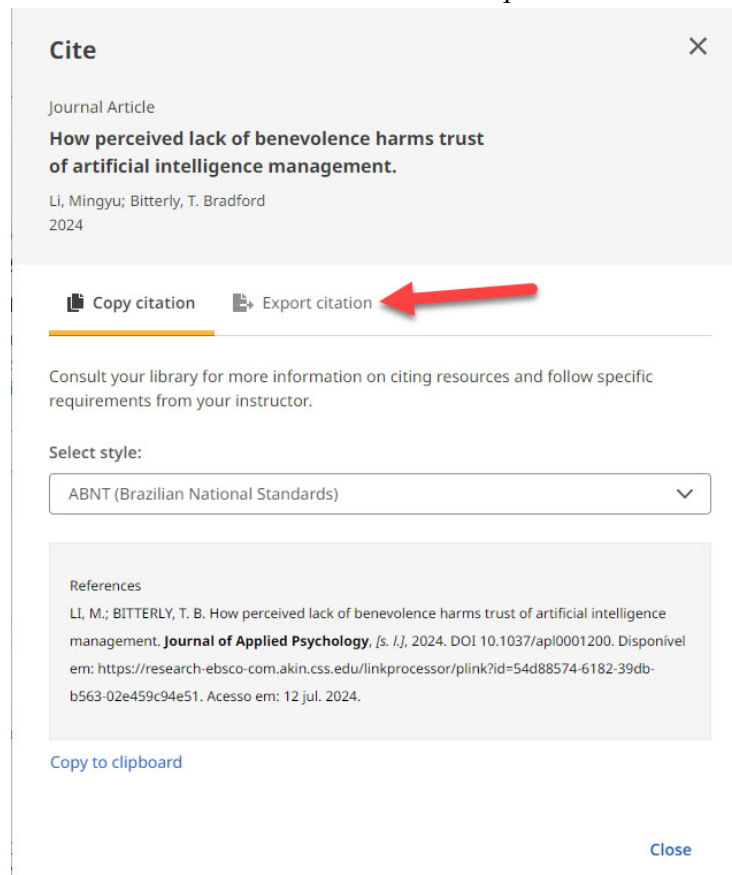

Your citations will now automatically be added to your EndNote library.

How to select articles and export them for individual databases:

For all EBSCO Databases

(These include SOLAR, CINAHL, MEDLINE, SocINDEX, Business Source Ultimate, and any other database that has the EBSCO name on it)

To export a record, click on the cite icon and then choose *Export citation*.

2020 JAN 4 (NewsRx) -- By a News Reporter-Staff News Editor at Obesity, Fitness & Wellness Week -- Investigators publish new report on Life Science Research - Wildlife Management. According to news reporting from Anchorage, Alaska, by NewsRx journalists, research stated, "Large-scale industrial activities can have negative effects on wildlife populations. Some of these effects, however, could be reduced with effective planning prior to development."

The news correspondents obtained a quote from the research from U.S. Fish and Wildlife Service, "The

Background

Otitis media is inflammation of the middle ear and is usually caused by infection. It affects people of all ages but is particularly common in young children. Around 164 million people worldwide have long-term hearing loss caused by this condition, 90% of them in low-income countries. As zinc supplements prevent
