

**DISABILITY ACCESSIBILITY OF THE WEBSITES
OF THE 50 BUSIEST US AIRPORTS:
ARE THERE BARRIERS FOR THE DISABLED?**

Abstract

With the number of disabled travelers continuously increasing, airports are faced with the challenges associated with making accommodations for accessibility for the disabled. Before passengers arrive at the airport in question, they need to know what accommodations are available. In this paper, we investigate the disability-accessibility of the home pages of the 50 busiest airports in the U.S. using the updated standards, Web Content Accessibility Guidelines (WCAG 2.0).
